

Using Filemaker Pro Developer self opening files.

It is usually easier to have the folder on your "desktop"

Open a folder.

Don't change anything or it might not work

Double click on the application icon, usually the one with colors.

Once the program is running, fish around and see what you find for controls

The fake rolodex image is a control and change the records you are viewing.

Under VIEW you can also change things, try "browse", "find", "view as table".

If you get lost go to RECORDS and try "view all records"

You can't hurt it so try anything you fancy .

I'll try to answer questions.
