1

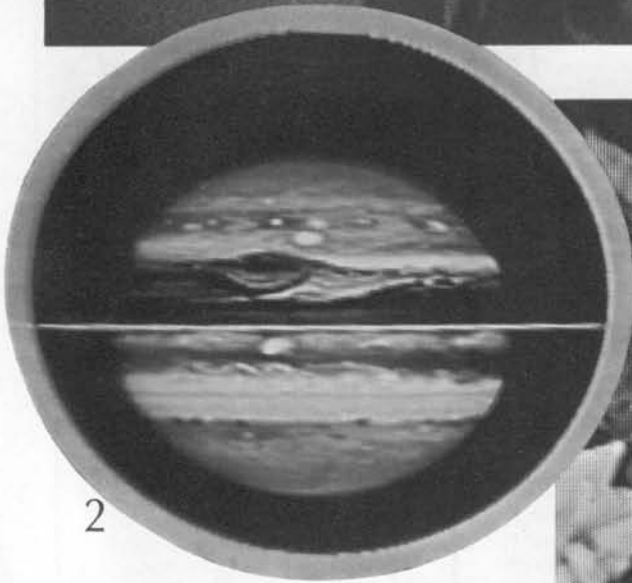

Visual music? This is the term we have chosen to describe Victor Ancona's very broad and unusual approach to video music.

Visual music means a great many things here. It means musical composition by such people as Richard Wagner, Philip Glass, Jimi Hendrix and Robert Ashley. It means, in Ashley's case, opera for television. It means avant garde. It means alternative art. It means commercial promotion.

Above all, visual music here means the synthesis of video and music. With musicians becoming more visual and artists getting more musically oriented, the possibilities for collaboration and fusion are endless, and results in a great variety of work.

Here we bring you a representative sampling of the visual music world.
—Michael Greenhouse

How to step up to 3-tube performance without overstepping your budget. Introducing the Panasonic WV-555.

If you've wanted to step up to the performance and features of a 3-tube ENG camera but thought the price was too high, think again. Introducing the Panasonic WV-555.

Not only is the WV-555 priced right, it's packed with performance and features you'll find in cameras costing thousands more. For brilliant color imagery the WV-555 incorporates a middle index prism optical system with three $\frac{2}{3}$ " Saticon® tubes. The result is an outstanding 600 lines

horizontal resolution and 54dB S/N ratio. With a minimum of blooming, comet tailing and lag.

What's more, the WV-555 will maintain its high-quality picture even when the lights are low. Just flick the +6/+12dB high-gain switch and shoot in light as low as 8 footcandles at f1.4. In addition to the WV-555's outstanding picture quality, there are equally outstanding automatic circuits. Like one-touch auto-centering, as well as auto white and auto black. Both with

memory. And when lighting conditions change, the WV-555's iris automatically changes too.

To keep you tuned in to operating conditions, the WV-555's 1.5" electronic viewfinder provides LEDs for automatic settings, low battery, high gain and more.

Of course, the WV-555 easily doubles as a studio camera with its optional remote control unit, 5" high-resolution viewfinder as well as 2-line vertical aperture correction.

The Panasonic WV-555.

The 3-tube camera for professionals who thought they had to settle for one tube.
